

QUICK FIX

FOR REPAIRING & CUSTOMIZING SOFTBAITS

REPAIRING

When teathed predator fishes attack your softbaits, the damage on the softbait can be so heavily that it's no longer able to use. It can be really disappointing if you damage your favorite softbait while fishing and don't have another same one with you. QuickFix makes it possible to repair the damaged parts easily and very quick, so you can fish your favorite softbait just minutes after repairing!

USE FOR REPAIRING

- Add QuickFix at both ends of the damaged parts with the brush applicator.
- Gently press the damaged parts together for 2 minutes.
- Let the softbait rest for 5 minutes... and fish on, your softbait is fixed!

CUSTOMIZING

With QuickFix you are able to glue parts from different softbaits together to get your unique softbait! Change the color-design or the movement of your softbait by adding bigger/smaller paddle tails, twister tails, etc.

There are numerous softbait variations you can prepare with QuickFix; for example: When you have a fully white softbait and you want a red tail. Cut of the white tail of your white softbait and cut of the tail of a red softbait. Add QuickFix with the brush applicator at the end of the tailless white softbait body and the cutted off red tail and press them gently together for 2 minutes. You just made your own custom designed softbait!

SaBoFlex Quick Fix comes in a handy 10 ml. bottle with a brush applicator which makes it really easy applying the material on the softbait surfaces.
